

HydroClear™ HydroFloc™ Water Clarifier contains a proprietary blend of Aluminum Sulfate, Potassium Phosphate, and Sodium Carbonate. These ingredients combine to make this one of the most concentrated flocculants in the marketplace. HydroFloc™ quickly clears cloudy water in pondless water features, water gardens, Koi ponds, and Russell Watergardens' exclusive Hybrid Ponds™ and CrossOver Ponds™.

HydroFloc™ Water Clarifier contains positively charged molecules that attract, bind, and coagulate negatively charged suspended particulates that cloud water. The particles can then be trapped in capable filtration systems such as Hydro Vortex™ and Hydro Bead Vortex™ filters for easy removal. This process is known as flocculation.

HydroFloc™ Water Clarifier is safe for pond fish and koi, aquatic plants, and pond habitat wildlife. Use only as directed.

Provide aeration via waterfalls, fountains, or aerators when using this product. For best results, dilute the dosage amount with 2-3 gallons of water, then apply the final solution to circulation points.

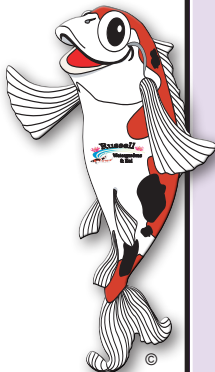

Cloudy water starts clearing up within hours of application. For severe cloudy water, a second dose may be applied 24 hours later. Use as needed to keep water clean and free of soils and other water clouding suspended particulates.

**Dosage:**

1 ounce per 500 gallons

16 fl. oz. per 8,000 gallons

**KEEP OUT OF REACH OF CHILDREN. NOT FOR HUMAN OR ANIMAL CONSUMPTION**
